Precise Hydraulic Damping

Dampers are 3-way or 4-way adjustable.

All our dampers feature low seal friction together with high flow hydraulics and a large 45mm piston, giving a damping system that dissipates energy from the first millimetre of movement.

Unique features

- Rebound hydraulics to give instant wheel release/drop out while still retaining control over the tyre movement. Adjustment is coupled to a temperature control valve to ensure consistency throughout the entire damping range, even through the toughest of conditions.
- Softer springs allow for less rebound damping, enhancing mechanical grip, increased tyre life and produces a smoother ride. The sensitive damping controls the chassis and tyre movement, ultimately resulting in greater driver confidence through a stronger feeling for the track.

Hydraulic Bump Stop

4-way adjustable dampers feature a second piston that provides extra damping towards the end of the stroke, giving greater support from high loads/landings. Unlike traditional bump stop rubbers, HBS prohibits recoil which otherwise unsettles the vehicle.

Coating and protection

We know, from our many years experience in the World Rally Championship, that our suspension has to first and foremost, be reliable. We achieve this by continually pursuing the latest technology in surface treatments and coatings, ultimately producing a product that will maintain its functionality and performance. We carry this philosophy throughout our entire range of products.

Bespoke orders and setup

With a team of design engineers on-site, along with a full CNC machine shop, we can offer bespoke designs manufactured in-house. Set up and damper characteristics can also be altered to suit your needs. Contact one of our engineers to further discuss your specific requirements.

Advanced Suspension Systems:

Roller Bearing

As used by Prodrive and Citroen Sport in the WRC, with a combined total of nine World Rally Championship titles. These struts feature an ultra-low friction internal and external Roller Bearing system, with the latest in coating technology. The result is improved tyre grip and wear, as well as greater strength and rigidity.

This combined with our high-spec damper offers the ultimate in support and control.

Price and availability of the Roller Bearing system is available upon application.

Sliding Bush - available on all new struts

From our success with the Roller Bearing system, we can now offer a lower cost solution that has many of the advantages of the Roller Bearing, whilst maintaining the simplicity of the traditional fixed-bush system. This system has been successfully been used on both tarmac and gravel events, including World and National Rallycross and Rally events.

Chassis Components

We offer a range of chassis components, such as top mounts. Featuring high grade steel bearings and adjustable and non-adjustable aluminium housings. Custom components are available on request

Rally Products - Subaru & Mitsubishi

All systems include springs, and come with a full setup sheet and maintenance guide. Clevis bracket options available. Contact us today for more information.

- Group N - Little to no modification to extend travel
- R4 (& Open Class) - Allows for modification to extend travel

MODEL	CONFIG.	SPEC.	PART NUMBER	PRICE (£GBP)
STi GE/GR/GJ etc. '07 -> '14	3 or 4-way	R4 - Gravel*	R4S11-1102/1003	6,495.00
